Regional Data Center Collaborative In-Person Small Group Breakouts

Draft Recommendations for Clinical & Claims Data Integration

- Create a national Master Patient Identifier (Enterprise Master Patient Identifier)
- Create a national Master Provider Identifier
- Bring together all payer data sources and patient experience data.
- Include all Providers in HIEs
- Rely on a trusted 3rd party in each region to broker the information and provide value-add analysis
- Standardize HIE data for (nationwide?) transparency reporting
- All sources send a standard set to the trusted 3rd party
- Report information at the lowest/most granular level that is valid and reliable
- If used together, HIE and claims data should be for the same time period
- Grant Providers access to review/verify data and results through the trusted 3rd party prior to reporting
